

BridgeChecker for MacOS Mojave: Defaults

We have created a shell script to write the defaults to the system after BridgeChecker is installed and run at least once. Attached zip file has shell scripts and below are usage instructions.

Install BridgeChecker

Run BridgeChecker

Exit BridgeChecker

Open the *update-bc-defaults.sh* script file in TextEdit

Update the below option values in script file (line #5 to #9) to your preferred defaults:

releaseIP

loadOnStartUp

enableWirelessm

EXIT_PASSWORD

selectedInterfaceOption (valid values are 0,1,2)

Open the Terminal and **Execute** command as *“./update-bc-defaults.sh”*

NOTE: If you receive a “Permission Denied” response, please **Execute** command - *“chmod 777 update-bc-defaults.sh”*

You can test it on any fresh machine or to test on existing system follow steps below:

- **Exit** BC app
- **Execute** - *“defaults delete com.accessagility.bridgechecker”* in Terminal
- **Execute** - *“./update-bc-defaults.sh”*
- **Start** the app and verify your options have been implemented
